

Biagioni

VICTORIA ELECTRONIC

description of specifications

The flexographic printing machine, printer consists of 4 groups with slow rotation, grinding, plate roll detachment provided by motors and hydraulic pistons. It has a self-controlled motor system. The press model EB: 100 is positioned between the unwinder and bags, and has the responsibility for printing the paper tape.

The flexographic printing group is made up of four elements printers, independent and individually adjustable for prints up to four colors. The plates used are made of rubber or photopolymer with thickness, mounted on the cylinder, 3 mm including the double-sided tape. The car has an engine's ignition and electronically controlled, allowing a perfect centering of the finished print on the bag during any changes in production speed.
