

# VICTORIA ELECTRONIC

## description of specifications

The unwinding jumbo roll that supports the outcome of which is provided by a DC motor controlled by the system, this gives a constant supply both in speed and tension. It features dual rotation and automatic control of the diameter of the parent reel. E 'consists of two sheets of thick machined on which they are obtained by machining the fittings for the various functional groups. They are held together by tubular spacers.

The unroll the coil supports mother whose conduct is provided by a DC motor with the speed controlled electronically depending on the variations of a dancer. Everything is managed by a PLC.

In this way the press is ensured continuous and constant supply of paper tape and a perfect tension control.

linear unwinder
